

# CS 544 Exam 2 (19%) - Spring 2025

Instructor: Tyler Caraza-Harter

First/Given Name: \_\_\_\_\_ Last/Surname: \_\_\_\_\_

Net ID: \_\_\_\_\_ @wisc.edu

Fill in these fields (left to right) on the scantron form (use pencil):

1. LAST NAME (surname) and FIRST NAME (given name), fill in bubbles
2. IDENTIFICATION NUMBER is your Campus ID number, fill in bubbles
3. Under A of SPECIAL CODES, tell us about the nearest person (if any) to your left. 0=no person to the left in your row, 1=somebody you do not know is there, 2=somebody you do know is there.
4. Under B of SPECIAL CODES, do the same as B, but for the person to your right
5. **Under C of SPECIAL CODES, write 7 and fill in bubble 7.** This is very important!

Make sure you fill all the special codes above accurately in order to get graded.

You have 40 minutes to take the exam. Use a #2 pencil to mark all answers. When you're done, please hand in these sheets in addition to your filled-in scantron. You may not sit adjacent to your friends or other people you know in the class (having only one empty seat is considered "adjacent"). You may only reference your notesheet. You may not use books, your neighbors, calculators, or other electronic devices on this exam. Please turn off and put away portable electronics now.

If multiple answers are correct, choose the best answer.

Do not communicate with anybody besides the teaching team about questions or answers until exam grades have been posted.

(Blank Page for You to Do Scratch Work)

**Q1. Cassandra Quorums: Given W=10 and RF=10, what should R be to make sure readers see successful writes? If multiple satisfy this, choose the smallest correct.**

- (A) 1    (B) 2    (C) 5    (D) 7

**Q2. You attempt a Cassandra INSERT with a primary key that is already used by one row that is already in the table (the table was created with a cluster key). What happens?**

- (A) the insert is ignored  
(B) an error is raised  
(C) previous row is updated  
(D) there will be two rows with the same primary key

**Q3. What is filter in Spark?**

- (A) action    (B) projection    (C) transformation

**Q4. In Cassandra, what node(s) can serve as a coordinator for a read to row X?**

- (A) only the boss  
(B) only the first worker encountered when walking the ring starting from X's token  
(C) only workers with a replica of X  
(D) any worker

**Q5. The single NameNode in an HDFS cluster is becoming a bottleneck. The cluster contains a small number of files, but each is extremely large. What is most likely to help alleviate load on the NameNode?**

- (A) add more DataNodes  
(B) increase the block size  
(C) decrease the block size  
(D) split the few big files into many small files

**Q6. What determines the number of output files generated by a MapReduce job?**

- (a) # of map tasks    (B) # of map calls    (C) # of reduce tasks    (D) # of reduce calls

**Q7. What technique is used when updating multiple replicas of a Cassandra token ring data structure?**

- (A) gossip    (B) quorums    (C) pipelined writes    (D) at-most-once semantics

**Q8. You want to connect from a browser on your laptop to Jupyter running in a container on your VM. You take the following steps:**

1. Write a command in the Dockerfile to launch Jupyter on port 2947
2. Use `-p 3633:2947` in the `docker run ...` command
3. Use `-L localhost:4814:localhost:3633` when establishing the SSH tunnel
4. Enter `http://localhost:????/` in the browser

What should `????` be in step 4?

- (A) 5000 (B) 4814 (C) 3633 (D) 8888 (E) 2947

**Q9. What statement about the memory requirements for running the PLANET algorithm is correct?**

- (A) all training data must fit within the memory of a single machine  
(B) all training data must fit in the cumulative memory available across all machines in the cluster  
(C) it is OK if training data does not fit in memory across the cluster

**Q10. In a Dockerfile, how do you specify the program that should launch (by default) when a container starts?**

- (A) EXEC (B) RUN (C) CMD (D) DO

**Q11. You write 100 MB to a 3x replicated file in HDFS, then later read it back. How much data will be read and written to disks across the cluster?**

- (A) 100 MB written, 100 MB read  
(B) 100 MB written, 300 MB read  
(C) 300 MB written, 100 MB read  
(D) 300 MB written, 300 MB read

**Q12. For a MapReduce job, you have 1000 input key/value pairs, 500 intermediate key/value pairs, and 30 output key/value pairs. Among the 1000 inputs, there are 8 unique keys. How many times will `map(...)` be called?**

- (A) 8 (B) 30 (C) 500 (D) 1000

**Q13. Assuming 2x replication, which node(s) are responsible for row token 0, assuming the following token map?**

`token(n1) = [-1, -8, -2], token(n2) = [3], token(n3) = [4, -3]`

Feel free to annotate the following if it is helpful:

-8 | -7 | -6 | -5 | -4 | -3 | -2 | -1 | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7

- (A) only n1 (B) only n2 (C) n1+n2 (D) n1+n3 (E) n2+n3

**Q14. What technique does HDFS use to DETECT DataNode failures?**

- (A) partitioning    (B) replication    (C) heartbeats    (D) block maps    (E) hashing

**Q15. If you have lots of RAM, which caching level will generally be fastest?**

- (A) MEMORY\_ONLY    (B) MEMORY\_ONLY\_SER    (C) DISK\_ONLY

**Q16. How many hits are there for a LRU cache of size 3 for the following workload?**

1, 3, 5, 4, 3, 4, 2, 1

- (A) 0    (B) 1    (C) 2    (D) 3    (E) 4

**Q17. You have 3 billion floating point operations to do on a device capable of 6 MFLOPS.**

**How many seconds will it take to do the operations?**

- (A) 0.5    (B) 1    (C) 2    (D) 500    (E) 2000

**Q18. For the below Spark SQL query, over which column(s) will hash values be calculated for hash partitioning?**

SELECT SUM(X), Y FROM mytable GROUP BY Y, Z;

- (A) X    (B) Y    (C) Z    (D) X,Y    (E) Y,Z

**Q19. Is the below data layout column oriented or row oriented?**

Table:

6,3,4  
1,2,5

Disk layout: 6,3,4,1,2,5

- (A) column oriented    (B) row oriented

**Q20. You are using Spark to join two large tables that are roughly equal in size. A large number of worker machines will be involved. What join algorithm should you pick?**

- (A) Broadcast Hash Join    (B) Shuffle Sort Merge Join
